## Description

BQ-240ANAV 0-10V dimmable LED Driver is a kind of Constant Voltage dimmable LED power supply that our company R&D, with high power factor, high efficiency, high precision, adopting the high efficiency, stable, low loss of switch control chip. It was made with high-quality components, so it had the characteristics like low noise, energy-saving, environmental protection, and long life, etc.

### 1.4 Working principle

BQ-240ANAV 0-10V Dimmable LED

Driver is with the Constant Voltage feature, the working condition is as the picture under.

### 1.5 Circuit Drawing

- Connect the 0-10V signals to the DIM terminal and the positive electrode connects to +, and the negative electrode connects to -.

- In 0-10V dimming mode, when the input voltage is less than 0.9V, the light will be turned off. When it's more than 0.9V, the light will be turned on. ( $\pm 0.2V$  tolerance is acceptable.)

- The minimum dimming depth of 0-10V dimming is 0.5%.

- The pins of the 0-10V DIM terminal without any signal connected: 100% rated output current
