### Mechanical Structures and Installations

### Wiring Diagram

Note:

1. Connecting with green terminal (DMX AMP) or an extra amplifier will be needed when more than 32 decoders are connected, or use overlong signal line, signal amplification should not be more than 5 times continuously.
2. If the recoil effect occurs because of longer signal line or bad line quality, please try to connect 0.25W 90-120Ω terminal resistor at the end of each DMX signal line.

## OLED screen interface

Short press MODE key, switch between DMX decoder mode, Dimmer mode and RGB controller mode.  
 Short press SETUP key, enter parameter setting state, and switch between multiple parameter item.  
 press < or > key for parameter adjustment.  
 long press SETUP key or wait 30s to quit parameter setting state.  
 long press M & > key for 2s, enter fast self-testing.  
 Long press < & > key for 2s, restore factory default parameter.

### DMX decoder mode

DMX Decoder  
 Addr:001 RGB  
 PwMtz:Std 8bit  
 Curve:Standard

DMX decode start address:

Range: 001~999

DMX decode mode:

DIM (1CH single color) CCT (2CH color temperature) RGB (3CH)

Output PWM frequency:

Std (2KHz)

High (8KHz)

Mid (500Hz)

Low (250Hz)

Higher PWM frequency, will cause lower output current,  
 higher power noise, but more suitable for camera(No flickers for video).

Grey level:

8bit

16bit (choose it if the DMX master support 16 bit)

Output dimming curve(Only valid for 8bit Grey level):

Standard (Gamma 1.6)

Linear

Gamma0.1-9.9

It is recommended to use standard,  
 0.1-9.9 is for special requirements.

### DMX master mode as 12 channel dimmer
